SteerHealth

The Patient Growth Operating System

Steer helps you capture new patient intent 24/7, guide people to the right next step, and convert more inquiries into booked appointments while keeping staff workload under control.

One coordinated motion to reduce access leakage

Instead of stitching together intake forms, phone trees, and scheduling tools, Steer brings together a 24/7 digital entry point plus automated slot-filling logic so demand doesn't evaporate after hours and cancellations don't become empty chair time.

Why Steer Growth OS?

Capture demand the moment it happens

65% of patients look for doctors outside office hours. Steer meets them in the moment, captures intent, and routes them into the right scheduling path before they bounce.

Convert more "maybe" into "booked"

Not every inquiry is ready to schedule immediately. Steer follows up, nudges, and clears friction so more people complete the booking journey.

Improve acquisition efficiency without scaling headcount

Steer acts like an acquisition engine: reduce missed calls, reduce drop-offs, and increase booked visits from the same marketing + referral demand without forcing your team to expand the front desk or call center.

PROBLEMS THIS SOLVES

- New patient inquiries that arrive after hours and disappear by morning
- Slow response times that reduce conversion from intent → appointment
- Cancellations that create avoidable gaps in the schedule
- Manual backfill work that consumes staff time
- A disconnected journey across "contact us," intake, follow-up, and scheduling

SteerHealth

The Growth OS

- Turn interest into scheduled visits 24/7
- Protect the schedule you already earned

Use Cases

After Hours: people enter through your digital front door → get guided and qualified → schedule (or get nurtured to schedule).

During the day: cancellations trigger automated outreach + waitlist logic to fill openings

Ongoing: admins fine-tune rules (what gets asked, where patients route which slots get prioritized) based on performance.

Key Features

Always-on Patient Entry

- Captures after-hours inquiries and missed intent
- Guides patients to enable auto scheduling
- Creates a clean handoff to staff only when needed

Smart Slot Filling

- Detects cancellations and open slots that matter most
- Automatically reaches out to the right patients to fill openings
- Reduces manual calling and last-minute scrambling

Clinician Dashboard

- Shows inquiries, bookings, drop-offs and backfills
- Tracks access conversion and schedule utilization over time.
- Lets teams tweak routing, eligibility, prioritization, and nudges.

65%	After-hours intent captured
28%	More visits via smart scheduling
$500K	Per-clinic annual potential

Secured by HIPAA + SOC 2.

- No heavy lift required.
- No need to switch EHR.
- No need to hire staff.
- No need for multiple logins.

"With the systems Steer helped us build, I often say we're doing the work of 8 to 10 people with only 3.5 staff members, that kind of leverage is priceless."
