SteerHealth

The Patient Growth & Retention Operating System

Steer helps functional medicine clinics capture new patient intent 24/7, guide people to the right next step, and turn first visits into long-term care plans, without adding more front-desk or care-coordinator headcount.

One platform to reduce access & retention leakage

Instead of stitching together forms, phone trees, reminders, follow-ups, and manual patient chasing, Steer brings together new patient growth and longitudinal engagement so patients don't fall through the cracks, before the first visit and even after visit.

Why Steer Growth & Retention OS?

Capture demand the moment it happens

65% of patients look for doctors outside office hours. Steer meets them in the moment, captures intent, and routes them into the right scheduling path before they bounce.

Convert more "first visits" into "care journeys"

In Functional Medicine, the first appointment is just the start. Steer automates the next steps labs, follow-ups, check-ins, plan adherence so patients keep moving forward instead of silently dropping off. This is the "Journey Sequencing" layer.

Grow patient lifetime value

It acts like an acquisition engine: reduce missed calls, reduce drop-offs, and increase booked visits from the same marketing + referral demand without forcing your team to expand the front desk or call center.

PROBLEMS THIS SOLVES

- New patient inquiries that arrive after hours and disappear by morning
- Slow response times that reduce conversion intent → appointment
- Cancellations that create avoidable gaps in the schedule
- Patients who complete a first visit but don't book the follow-up
- Lab results & care plan steps that rely on manual chasing
- Dormant patients who quietly churn and never get reactivated

Steer Health

The Growth & Retention OS

- Turn interest into scheduled visits 24/7
- Turn scheduled visits into longitudinal relationships

Use Cases

After Hours: Patients enter through your digital front door → get guided and qualified → schedule (or get nurtured to schedule).

During the day: Cancellations trigger automated outreach + waitlist logic to fill openings.

Post-visit: Sequences automate the "what happens next" (labs, results review booking, plan adherence check-ins, refill prompts, membership renewals).

Reactivation: Dormant patients get targeted outreach based on time-since-last-visit and care-plan stage.

Ongoing: Admins fine-tune rules (questions asked, routing, slot priorities, journey triggers) based on outcomes.

Key Features

Always-on Patient Entry

- Captures after-hours inquiries and missed intent
- Guides patients to enable auto-scheduling or the right next step
- Creates a clean handoff to staff only when needed

Smart Slot Filling

- Detects cancellations and open slots that matter most
- Automatically reaches out to the right patients to fill openings
- Reduces manual calling and last-minute scrambling

Journey Sequencing Engine

- Triggers sequences based on where the patient is in the journey
- Automates follow-ups and scheduling to reduce drop-off.
- Improves retention and reactivation without overwhelming staff

65%	After-hours intent captured
28%	More visits via smart scheduling
$500K	Per-clinic annual potential

Secured by HIPAA + SOC 2.

- No heavy lift required.
- No need to switch EHR.
- No need to hire staff.
- No need for multiple logins.

"With the systems Steer helped us build, I often say we're doing the work of 8 to 10 people with only 3.5 staff members, that kind of leverage is priceless."
